

Fast Software Encryption 2027

IACR Transactions on Symmetric Cryptology

Call for Papers

General Information on FSE 2027

The 33rd International Conference on Fast Software Encryption (FSE 2027)

General information: <https://tosc.iacr.org/>

Submission information: <https://tosc.iacr.org/Submission>

FSE 2027 is the 33rd edition of Fast Software Encryption conference, and one of the area conferences organized by the International Association for Cryptologic Research (IACR). Original research papers on symmetric cryptology are invited for submission to FSE 2027. The scope of FSE concentrates on fast and secure primitives and modes for symmetric cryptography, including the design and analysis of block ciphers, stream ciphers, encryption schemes, hash functions, message authentication codes, (cryptographic) permutations, authenticated encryption schemes, cryptanalysis and evaluation tools, and security issues and solutions regarding their implementation. We also welcome cryptographic problems closely related to symmetric-key techniques, including those arising from their applications to security, implementation, and emerging areas such as machine learning systems (e.g., cryptanalytic model extraction).

Since 2017, FSE also solicits submissions for **Systematization of Knowledge (SoK)** papers. These papers aim at reviewing and contextualizing the existing literature in a particular area in order to systematize the existing knowledge in that area. To be considered for publication, they must provide an added value beyond prior work, such as novel insights or reasonably questioning previous assumptions. The title of a SoK paper must begin with "SoK:" followed by the title of the initial paper. ToSC also accepts submissions for **addendum** and **corrigendum** papers. Addendum papers aim at extending an existing ToSC paper in a novel, yet succinct way. The title of an addendum paper must begin with "Addendum to", followed by the title of the initial paper. Corrigendum papers aim at correcting a significant error in an existing ToSC paper. The title of a corrigendum paper must begin with "Corrigendum to", followed by the title of the corrected paper. Addendum and corrigendum papers are limited to 4 pages excluding bibliography and will not be presented at FSE. To be considered as addendum and corrigendum papers, such submissions must have at least one author overlapping with the original paper.

Publication Model

From 2017, FSE has moved to an open-access journal/conference hybrid model. Submitted articles undergo a journal-style reviewing process. Accepted papers are published in **Diamond Open Access** (free availability from day one) by the Ruhr University Bochum in an issue of the journal **IACR Transactions on Symmetric Cryptology**.

The yearly FSE event will consist of presentations of articles accepted to the IACR Transactions on Symmetric Cryptology journal, as well as invited talks and potentially social activities. This model has been established as a way to improve reviewing and publication quality while retaining the highly successful community event FSE. Thus, presentation of accepted papers is highly encouraged. In case no author

can travel due to unavoidable reasons, a presentation has to be recorded before the conference, and the recorded version can be shown at the conference. For any further information, please view the FAQ page: <https://tosc.iacr.org/FAQ>.

For FSE 2027, authors can submit papers to the IACR Transactions on Symmetric Cryptology four times, every three months on a predictable schedule. Authors are notified of the decisions about two months after submission. In addition to “**accept**” and “**reject**” decisions, papers may be provided with “**minor revision**” decisions, in which case the paper is conditionally accepted and an assigned shepherd will verify if the changes are applied, “**major revision**” decisions, in which case authors are provided with a list of requested changes that are likely to result in the paper being accepted, or “**reject and resubmit**” decisions when the reviewers see some potential in the paper, but there are significant issues to address before the paper can be properly evaluated.

In case of a “**major revision**” decision, the authors are invited to revise and resubmit their article to one of the following two submission deadlines (respectively one month and four months after the notification), together with a statement explaining how the reviews have been addressed. We endeavor to assign the same reviewers to revised versions. Major revision papers will be considered to be under review during the four months window after the notification; authors must formally withdraw their paper if they wish to submit it to another journal or a conference/workshop with proceedings. If the paper is resubmitted after more than four months, it will be treated as a new submission.

In case of a “**reject and resubmit**” decision, the authors can resubmit their article, but must wait at least for the second next submission deadline (four months after the notification), because the paper requires significant editorial or technical changes. These papers are not considered under review, and the revision may receive the same reviewers or different reviewers.

“**Rejected**” papers can only be resubmitted after significantly improving the results. Authors of rejected papers must wait at least for the third submission deadline (seven months after the notification) before resubmitting.

Papers accepted for publication before the end of February 2027 will be invited for presentation at that year’s conference. Note that papers submitted in December can be deferred to the next year’s conference in case of “major revision”.

Instructions for Authors

Submissions must not substantially duplicate work that any of the authors has published in a journal or a conference/workshop with proceedings, or has submitted/is planning to submit before the author notification deadline to a journal or other conferences/workshops that have proceedings. Accepted submissions may not appear in any other conference or workshop that has proceedings. IACR reserves the right to share information about submissions with other program committees and editorial boards to detect parallel submissions and the IACR policy on irregular submissions will be strictly enforced.

The submission must be written in English and be anonymous, with no author names, affiliations, acknowledgments, or obvious references. It should begin with a title, a short abstract, and a list of keywords. The introduction should summarize the contributions of the paper at a level appropriate for a non-specialist reader. The submission must be typeset in the `iacrj` L^AT_EX class, available at <https://publish.iacr.org/iacrj>. The class documentation includes detailed instructions for authors along with examples. The submission must be submitted electronically in PDF format. A detailed description of the electronic submission procedure is available at <https://tosc.iacr.org/Submission>.

In order to improve the quality of the review process, authors will be given the opportunity to enter a **rebuttal** between the indicated dates, after receiving the reviews.

The page limit for regular papers is 20 pages excluding bibliography. Authors are encouraged to include supplementary material that can assist reviewers in verifying the validity of the results at the end of the paper. Supplementary material that does not require extra reviewing effort (such as test values, source code, or charts) will be published with the paper, but are not included in the page count. However, material that requires careful reviewing (such as proofs of the main theorems) will be included in the page count, even if they are written as appendices.

If authors believe that more details are essential to substantiate the claims of their paper or to provide proofs, they can submit a longer paper (with no page limit); this should be indicated by checking the box “Long Paper” in the submission server. **Note that a submission should not append the phrase “(Long Paper)” to the title even if it is a Long Paper.** For long papers of up to 40 pages, the decision may be deferred to the next round at the discretion of the editors-in-chief (and to the next FSE if submitted in December). For papers longer than 40 pages, the first round of review may be dedicated only to evaluating whether the length of the papers is justified by the scientific contribution. Moreover, the decision may be deferred by one or more rounds at the discretion of the editors-in-chief.

Note that the page limit for the final version after acceptance is not as strict.

Submissions not meeting these guidelines risk rejection without consideration of their merits.

AI Tool Policy

The use of artificial intelligence (AI) tools is permitted according to the following policy. Using AI tools for grammar, spell checking, and/or basic editing is allowed and does not require any acknowledgment. If you have used AI for more extensive editing, including generating text, tables, figures, images, or data sets, please disclose it, if not in the text, then in a supplementary material or appendix. In that case, please describe all your AI-related edits or contents, including the AI tool version, prompt, query, etc., to the best of your ability. In any case, the use of AI tools is subject to the following requirements: (i) that these systems do not plagiarize, misrepresent, or falsify content in the submissions; (ii) that the resulting work in its totality is an accurate representation of the authors' underlying work and novel intellectual contributions and is not primarily the result of the tool's generative capabilities; (iii) that the authors accept responsibility for the veracity and correctness of all material in their work, including any computer-generated material. More explanations are available at <https://fse.iacr.org/2026/aipolicy.php>.

Conflicts of Interest

Authors, program committee members, and reviewers must follow the new IACR Policy on Conflicts of Interest available at <https://tosc.iacr.org/Call#coi>. In particular, we require authors to list potential conflict of interest with editorial board members at the time of submission, taking into account the set of all authors, and to explain the reason of each conflict.

Timeline for FSE 2027 / IACR Transactions on Symmetric Cryptology 2026/2027

All upcoming deadlines are 23:59:59 Anywhere on Earth (AoE).

IACR Transactions on Symmetric Cryptology, Volume 2026, Issue 2:

- Submission: 1 March 2026
- Rebuttal: 5-8 April 2026
- Decision: 1 May 2026
- Camera-ready deadline for accepted papers (and conditionally accepted): 28 May 2026

IACR Transactions on Symmetric Cryptology, Volume 2026, Issue 3:

- Submission: 1 June 2026
- Rebuttal: 5-8 July 2026
- Decision: 1 August 2026
- Camera-ready deadline for accepted papers (and conditionally accepted): 28 August 2026

IACR Transactions on Symmetric Cryptology, Volume 2026, Issue 4:

- Submission: 1 September 2026
- Rebuttal: 5-8 October 2026
- Decision: 1 November 2026
- Camera-ready deadline for accepted papers (and conditionally accepted): 28 November 2026

IACR Transactions on Symmetric Cryptology, Volume 2027, Issue 1:

- Submission: 1 December 2026
- Rebuttal: 5-8 January 2027
- Decision: 1 February 2027
- Camera-ready deadline for accepted papers (and conditionally accepted): 28 February 2027

Program Co-Chairs/Co-Editors-in-Chief

Yosuke Todo, NTT Social Informatics Laboratories, Tokyo, Japan

Gilles Van Assche, STMicroelectronics, Diegem, Belgium

Program Committee/Editorial Board

Riham ALTawy, University of Victoria, Victoria, Canada

Ravi Anand, Indraprastha Institute of Information Technology Delhi (IIIT-Delhi), New Delhi, India

Tim Beyne, KU Leuven, Leuven, Belgium

Ritam Bhaumik, Technology Innovation Institute, Abu Dhabi, UAE

Anne Canteaut, Inria, Paris, France

Wonseok Choi, Daegu Gyeongbuk Institute of Science and Technology (DGIST), Daegu, Korea

Benoît Cogliati, Thales DIS France SAS, Meudon, France

Nilanjan Datta, Institute for Advancing Intelligence, TCG-CREST, Kolkata, India

Christoph Dobraunig, Intel, Hillsboro, USA

Orr Dunkelman, University of Haifa, Haifa, Israel

Technical University of Berlin, Berlin, Germany

Maria Eichlseder, Graz University of Technology, Graz, Austria

Antonio Flórez-Gutiérrez, NTT Social Informatics Laboratories, Tokyo, Japan

David Gérard, Technology Innovation Institute, Abu Dhabi, UAE

Shibam Ghosh, Inria, Paris, France

Hosein Hadipour, Ruhr University Bochum, Bochum, Germany

Rachelle Heim Boissier, Université Libre de Bruxelles (ULB), Brussels, Belgium

Akinori Hosoyamada, NTT Social Informatics Laboratories, Tokyo, Japan

Kai Hu, Shandong University, Qingdao, China

Tetsu Iwata, Nagoya University, Nagoya, Japan

Jérémy Jean, ANSSI, Paris, France

Ashwin Jha, Ruhr University Bochum, Bochum, Germany

Mustafa Khairallah, Umeå University, Umeå, Sweden

Dmitry Khovratovich, Ethereum Foundation, Luxembourg, Luxembourg

Nathalie Lang, Agentur für Innovation in der Cybersicherheit GmbH, Halle, Germany

Jooyoung Lee, Korea Advanced Institute of Science and Technology (KAIST), Daejeon, Korea

Charlotte Lefevre, Radboud University, Nijmegen, The Netherlands

Eik List, Nanyang Technological University (NTU), Singapore, Singapore

Fukang Liu, Institute of Science Tokyo, Tokyo, Japan

Willi Meier, University of Applied Sciences and Arts Northwestern Switzerland, Windisch, Switzerland

Marine Minier, Université de Lorraine, Nancy, France

Nicky Mouha, KeyCryptic, Bethesda, USA

Yusuke Naito, Mitsubishi Electric Corporation, Kanagawa, Japan

Patrick Neumann, Inria, Paris, France

Samuel Neves, University of Coimbra, CISUC, Coimbra, Portugal

Kaisa Nyberg, Aalto University, Espoo, Finland

Morten Øygarden, University of Bergen, Bergen, Norway

Simula UiB, Bergen, Norway

Goutam Kumar Paul, Indian Statistical Institute, Kolkata, India

Léo Perrin, Inria, Paris, France

Thomas Peters, UC Louvain, Louvain-la-Neuve, Belgium
Shahram Rasoolzadeh, Ruhr University Bochum, Bochum, Germany
Francesco Regazzoni, University of Amsterdam, Amsterdam, The Netherlands
Università della Svizzera Italiana, Lugano, Switzerland
Sondre Rønjom, University of Bergen, Bergen, Norway
Nasjonal sikkerhetsmyndighet, Oslo, Norway
Kosei Sakamoto, Mitsubishi Electric Corporation, Kamakura, Japan
The University of Osaka, Osaka, Japan
Yu Sasaki, NTT Social Informatics Laboratories, Tokyo, Japan
National Institute of Standards and Technology (NIST) Associate, Gaithersburg, USA
André Schrottenloher, Inria, Rennes, France
Hadi Soleimany, Shahid Beheshti University, Tehran, Iran
Ling Song, Jinan University, Guangzhou, China
Patrick Struck, University of Konstanz, Konstanz, Germany
Ling Sun, School of Cyber Science and Technology, Shandong University, Qingdao, China
Siwei Sun, University of Chinese Academy of Sciences, Beijing, China
Tyge Tiessen, Technical University of Denmark, Kongens Lyngby, Denmark
Elmar Tischhauser, Marburg University, Marburg, Germany
Meltem Sönmez Turan, National Institute of Standards and Technology (NIST), Gaithersburg, USA
Damian Vizár, CSEM, Neuchâtel, Switzerland

Conference Information and Stipends

The primary source of information is the conference website. A limited number of stipends are available to those unable to obtain funding to attend the conference. Students, whose papers are accepted and who will present the paper themselves, will receive a registration fee waiver funded by the IACR Cryptography Research fund for students; they are encouraged to apply for additional assistance if needed. Requests for stipends should be sent to the general chair.

Contact Information

All correspondence and/or questions should be directed to either of the organizational committee members:

Program Co-Chairs/Co-Editors-in-Chief
